

C 4 S A M

C4SAM (Cockpit for Situation Awareness Monitoring) is a solution that helps to support digital infrastructures, detect vulnerabilities and internal or external attacks, whether IT, OT, IoT or IIoT.

It is a technology stack of best of breed single point solutions, which are **integrated** to provide a clear view of significant business-relevant information.

Solution

Our Mission/

We provide a platform that integrates open source and commercial modules with a simplified user interface and simplified automation processes to enable SMB's and their service partners to get the required maturity to support the digital transformation and to compete in their markets.

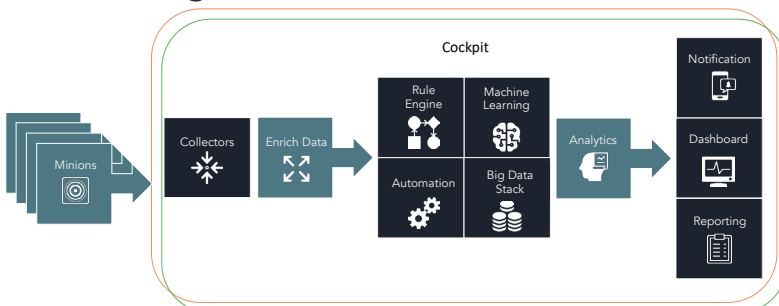

Increased availability and shorter downtime for infrastructure disruptions.

Increased cyber resilience by detecting vulnerabilities and early detection of abnormal network activity, as well as internal and external attack attempts.

Transforming Raw Data Into Decisive Information
